

## Environmental Policy

---

St Mary's Hall recognises its significant environmental impacts to be; energy consumption, resource consumption, waste generation, enhancement and protection of the natural environment and transport of guests and goods.

Committed to ensuring compliance with Environmental Legislation and ensuring pollution prevention, St Mary's Hall is committed to continual environmental improvements including:

Implementation of an ongoing waste management strategy to minimise, recover or recycle waste.

Implementing a full energy management programme to monitor and minimise energy consumption ongoing and minimise direct and indirect carbon emissions.

To support and promote local business and community partnerships and initiatives.

Implementation of an approved transport plan.

Growing 80% of food on our own farm or sourcing from local Scilly or Cornwall based suppliers.

Wherever possible recycled products will be used.

Operating equipment and sundries we purchase will have minimum negative impact to the environment.

Standard operating procedures within the kitchen to minimize the use of water and energy.

The use of eco friendly cleaning products wherever possible.

Food waste to be composted where possible.

The environmental policy will be annually updated and made available to interested parties
